

IoT (Internet of Things) enabled smart environment monitor for facility rooms

Real-time monitoring of temperature, humidity, water flooding, door open status, people movement etc is very important for all kind of facility room managers or support engineers.

However facility rooms may not like data center can have all pre-built communication cables and power supply points for different area monitoring.

Therefore IoT (Internet of Things) can provide a good choice for facility rooms.

Easy to setup and use
Wireless hardware
running by battery
Easy to install

Low Cost
Just install the hardware
by plug and play
Save the higher cost on cabling

Cloud based & Bid data
Secure cloud base platform
Big data storage

Variety of sensors
Support variety of sensors
More development all the time

Technology breakthrough
Apply different kind of
communication technology

Real time notification & reports
Support SMS, Email,
Mobile App notification
Different analysis reports
