

IoT (Internet of Things) enabled people tracking in improving workplace safety for construction industry

Our people tracking IoT solution mainly apply where long term projects are involved; like construction of commercial buildings, tunnels, etc. It helps in improving workplace safety, reducing operational bottlenecks, improve accountability and visibility.

Our solution people tracking solution helps in:

- Data analytics to understand potential choke points during peak hours
- Knowledge about worker movement to improve utilization of facilities
- Control and audio movement
- Monitoring the movement between floors & locations

Solution highlights:

No cable for both communication and tracking devices

Cloud-based solution, on-premise option also available

Easy relocation and quick to redeployment

Long battery life ensure low cost on maintenance

Big data storage & analysis reports

Real time monitoring & data capturing
